

Day 1 Internship Notes

Date: 01-06-2026

Work Start time

9:00am

Today's Objective

- Understand the basics of US Market.
- Learn how the internship work will be conducted.
- Explore the TradingView and market behaviour.
- Understand how to maintain GitHub Documentation.

Topics learned Today

1. Introduction to the US Stock Market:

Today I learned the basics of how the US stock market works and how companies are listed for public trading. I understood that stock prices move based on demand, supply, company performance, news, earnings, and market sentiment.

I also learned about:

- NYSE(New York Stock Exchange)
- NASDAQ(National Association of Securities Dealers Automated Quotations)
- Market opening and closing timings
- Pre-market and after-hours sessions

2. Understanding the Internship Workflow:

I understood the structure of the internship and the daily responsibilities expected from me.

Daily Responsibilities:

- Get Up-to-date with what's going on with the Big Stock Companies.
- Watch and follow Deepvue learning videos.
- Monitor US market movements during live market hours.
- Maintain daily GitHub documentation.
- Participate in morning and evening standup calls.

3. Introduction to TradingView:

Today I explored TradingView and learned:

- How to open charts
- How to search stocks
- How to change timeframes
- Basic candlestick observation

Stocks observed today:

- Tesla (TSLA)
- NVIDIA (NVDA)

4. Basic Understanding of Candlestick Charts:

I learned that candlestick charts represent price movement in the market.

Basic

Candlestick Components:

- Open Price
- Close Price
- High Price
- Low Price

I understood:

- Green candle indicates bullish movement
- Red candle indicates bearish movement

5. Market Observation:

Today I observed that:

- US market stocks are highly active during opening hours
- Technology stocks like NVIDIA and Tesla show strong volatility
- Volume increases significantly during market opening

Videos/Resources Followed

1. Basic US market structure videos
(<https://youtu.be/icyXl7B-s-4?si=GRK3wsgR67ZpfJVH>)
2. Deepvue introductory videos
(<https://youtu.be/7mJNvFbQSRk?si=AD7KVbLASsTv5Vfa>)

Questions I Had

1. Why do stocks become highly volatile during market opening?
2. Why does volume suddenly increase at specific timings?
3. How do institutional investors affect stock prices?

Answers

- Market opening has high volatility because many traders and institutions place orders at the same time.
- Volume increases when major buying or selling activity happens.
- Institutional investors move large amounts of money, which strongly impacts stock prices and momentum.

Key Takeaways From Day 1:

- The US market is highly dynamic and news-driven.
- Proper observation and documentation are very important.
- Trading is not just buying and selling understanding market behavior is essential.
- Consistency in learning and market observation will improve my understanding over time.

Today was mainly focused on understanding the internship workflow, getting introduced to the US stock market, exploring TradingView, and learning the basics of stock chart observation. I also understood the importance of daily documentation, market analysis, and consistent learning throughout the internship.
